PERSONAL SUMMARY

I'm a software engineering student who's passionate about web development and tinkering with microcontrollers. One of my key strengths is taking complex projects and breaking them down into clear, manageable tasks, allowing me to prioritize effectively and deliver results in a structured way. Outside of tech, I'm an origami artist, which has taught me skills like patience and structural precision, qualities I bring to every project.

TECHNICAL SKILLS

- **Languages:** PHP (8.x), JavaScript / TypeScript, HTML5, CSS3, Python, C/C++, Java
- **Frontend Frameworks & Tools:** React, Svelte 5, Tailwind CSS, Tabler UI
- **Backend & Databases:** Slim PHP, SQL (PostgreSQL, MariaDB, MySQL), Firebase
- **DevOps, Architecture & Cloud:** Docker, DBmate, Git, Hoppscotch, Postman, Vercel
- **Spoken Languages:** Hungarian (Native), English (C1)

WORK EXPERIENCE

Full-Stack Developer (Remote) | *IT NET Solution LTD* | 2026 - Present (6 Months)

- **Core Platform Architecture:** Built and architected most of the SvelteKit frontend and Slim PHP backend for a visual middleware platform. Independently handled the full implementation of core platform features.
- **Visual Workflow Builder (Frontend):** Developed the majority of the web application and a drag-and-drop workflow canvas using Svelte 5, Svelte Flow, Tailwind CSS, and Tabler UI. Engineered an automated layout system (Dagre), intelligent "Drop to Connect" mechanics, and a smart collision-resolution algorithm.
- **Backend & Enterprise Integration:** Built the server-side integration logic, session authentication, and API endpoints. Designed a custom Expression Engine to compile UI rules into OData queries and built a metadata abstraction layer to normalize data from enterprise APIs (e.g., SAP Business One, Zoho CRM).
- **Database & State Management:** Managed MariaDB using DBmate migrations to design relational tables for data routing. Formulated an immutable state history engine (Undo/Redo) with strict Directed Acyclic Graph (DAG) validation to prevent execution loops.
- **DevOps & Debugging:** Used Docker container logs for debugging both the frontend and backend. Resolved deep asynchronous race conditions (FOUC, theme state sync) via root layout manipulation and cookie parsing.

Web Developer Intern (Remote) | *origin/develop Kft.* | 2025 (3 Months)

- **Frontend UI:** Built responsive website components using Liquid, JavaScript, and Tailwind CSS.
- **Speed & SEO:** Improved website loading speeds and fixed indexing issues using Lighthouse audits.
- **Teamwork:** Managed daily tasks and bug fixes using Git, GitHub, and Agile workflows.

FEATURED PROJECT

Portfolio Website | *React, Vite, Firebase, Vercel*

- **Development & CMS:** Built a mobile-first responsive React SPA with Tailwind CSS and a custom real-time CMS dashboard using Firebase Auth and Firestore.
- **DevOps & SEO:** Established an automated GitHub to Vercel workflow and optimized the application with skeleton loading and complete SEO configurations.

EDUCATION

BSc in Software Engineering

University of Szeged, Faculty of Science and Informatics 2022 - Present
